# PRIDE PET DOOR

---

## HELPFUL HINTS

(PLEASE READ THIS BEFORE INSTALLING YOUR PET DOOR)

### MAKING SURE YOU HAVE THE RIGHT SIZE PET DOOR

The opening of your pet door should be 1/2 inch wider than the width of your pet's shoulder. If you have more than one pet, the door should be wide enough for the largest pet, but should be mounted low enough so the smallest pet can get through it easily. However, it is not a good idea to buy a pet door larger than your pet actually needs. Too large an opening leads to over zealous behavior and money spent on spare parts.

**HINT:** A quick and easy way to determine if the pet door is the correct size for your pet is to open your sliding glass or other house door so that the door opening is the same as the width of the pet door flap, then see if your pet can pass easily through the space. Don't worry about the height, since the pet door will be mounted according to the height of your pet.

You can use the list below to determine which Pride Pet Door model is best for your pet:

MODEL	SIZE OF PET
SD-300	For cats or toy breeds up to 4 inches across shoulders
MD-400	For Beagles and Poodles or pets up to 8 inches across shoulders.
LD-500	For German Sheperds and Boxers, or pets up to 11 inches across shoulders.
XLD-600	For Great Danes and St. Bernards, or pets up to 14 inches across shoulders.

### DETERMINING THE LOCATION OF YOUR PET DOOR

Your pet door can be mounted in any location where there is a surface large enough to place the frames. Some important considerations are the following:

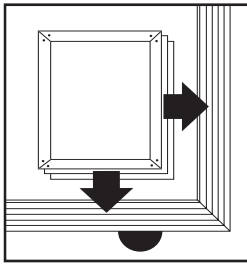

- 1. MOUNTING HEIGHT:** Bring your pet(s) to the place where you plan to install the pet door. On the surface where pet door will be mounted, make a mark to show the height of the pet's shoulders, and another mark to show the bottom of the pet's chest. Using these marks as a guide, place your pet door so that the pet does not have to stoop or jump to go through the pet door.
- 2. LOCATION ON A HOUSE DOOR:** If you are installing the pet door on a house door, it is a good idea to locate the house door off-center, away from the house door handle or knob. This makes it more difficult for someone to unlock the house door by reaching in through the pet door. For your security, it is recommended that a deadbolt lock be added to any house door into which a pet door is installed. Also, any gates leading to an area with a pet door should be locked.

### TEACHING YOUR PET TO USE THE PRIDE PET DOOR

With just a little help from you, your pet can quickly learn to use the pet door. Lift the flap slightly and coax the pet to come through a few times. Give him lots of praise when he comes through. If the pet is resistant, a treat or his favorite food can be useful. If your pet is highly resistant, you can tie up or remove the U-frame portion of the rubber assembly until the pet feels comfortable using the pet door. Then you can put the U-frame in its original position. Never push the pet through the opening as he may become frightened and continue to resist efforts to teach him to use the door.

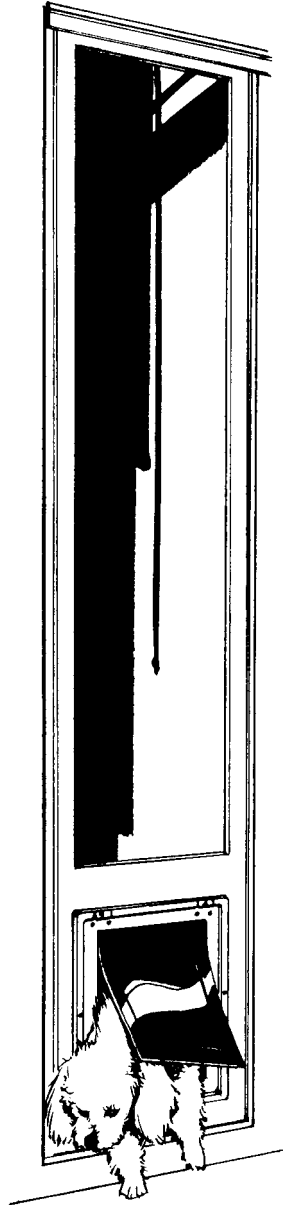

***If you want your pet to come in through a sliding glass door, here's the perfect answer!!!***

- Sturdy extruded aluminum
- Satin aluminum, Bronze, White gold or black
- Clear or obscure tempered glass
- Left or right sliding doors
- Full length weather-stripping
- Top and bottom adjustments
- Security locking device
- Fits opening 78.5" to 81" (Not over 81")
- No special tools required
- No holes or alterations

**Deluxe Models have Drop-In Security Panel**

To keep your pet from entering or leaving, security panel slides into either outside or inside frame of Deluxe Model Pride Pet Doors.

- Blends with your natural architecture

- Easy entry & exit for your pets... allows complete freedom
- No more endless-trips to let pets in or out---leaving doors open.
- Helps prevent troublesome household accidents
- No more scratched doors

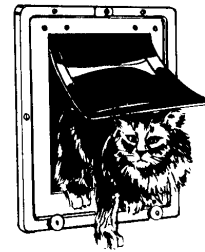

Manufactured under  
U.S. Patent Numbers  
3,464,158

## PERMANENT INSTALLATIONS

Insert Pet Panel into sliding glass or sliding door track. (Glass door track makes for better installations). Determine if top, bottom, or both adjustment channels are required.

1. Push adjustment channels on Pet Panel as far as possible. Place Pet Panel, with adjustment channels on both ends, in sliding door jamb. Close sliding door against Pet Panel for a firm, flush fit.
2. Extend adjustment channels evenly allowing the Pet Panel to completely fill the available height area. Never extend adjustment channels so that there is less than 1/2" remaining on Pet Panel.
3. Each adjustment channel should be attached to the Pet Panel by drilling 3--1/8" holes on the inside of the Pet Panel and insert the #8x1/2" Phillips pan head screws. Be sure screws adjustment channel do not interfere with the glass door surrounding-frame.
4. Secure Pet Panel to surrounding frame by drilling through frame and into the Pet Panel. Drill 3-1/8" holes at both top & bottom of Pet Panel and 3 along side of Pet Panel. Insert #8x1/2" Phillips pan head screws.

## TEMPORARY INSTALLATIONS

1. Secure adjustment channels in the same manner as permanent installation provides, however, adjustment channels should be placed so that the panel can be removed with ease from the track. Adjustment channels therefore should not be extended to fill full height of the opening.
2. Attach rubber bumpers both top & bottom and on both sides of the Pet Panel, if required, to make for tight fit in door jamb.

### YOUR PET AND THE NEW PRIDE PET PANEL

In the design and manufacture of the pride Pet Panel, effort has been made to produce a two way door that your pet can operate with complete confidence.

Most animals will learn to use the Pet Panel in a matter of minutes, with a help from the owner. In introducing the dog or cat to the Pet Panel, lift up the flap a inches, coax him through a few times. The first times he goes through "on his own" he has graduated.

If you selected the Deluxe Series Pet Panel, you may deny the use of the door to your pet by inserting the closing panel on pet's side of the door. He will then see a solid door and will not attempt to use it. With this installation your pet now has the same "come and go" freedom" that his master enjoys.
